Toshkent – 2026

[Imzolar varag'i (Signatures block)]

ANNOTATSIYA

Ushbu bitiruv malakaviy ishi O'zbekistonning 2017 yildagi islohotlardan so'ng Shimoliy-Sharqiy Osiyo (Xitoy, Yaponiya, Janubiy Koreya) ishlab chiqarish tarmoqlariga integratsiyalashuvini tadqiq etadi. Tadqiqot maqsadi to'g'ridan-to'g'ri xorijiy investitsiyalar (TXI) va savdo ochiqligining sanoatlashishga ta'sirini empirik baholashdan iborat. Metodologiya Chow tarkibiy uzilish testi, oshkor qilingan qiyosiy ustunlik (RCA) indeksleri va ekonometrik modellashtirishni (OLS regression) o'z ichiga oladi. Natijalar shuni ko'rsatadiki, islohotlar sanoat o'sishida tarkibiy uzilishni ta'minlagan bo'lsa-da, integratsiya hozircha "asir" (captive) boshqaruv shaklida qolmoqda. Xitoy asosan infratuzilmaga, Yaponiya va Janubiy Koreya esa yuqori texnologiyali ishlab chiqarishga investitsiya kiritmoqda. Asosiy xulosadan iboratki, tranzit xarajatlari va logistika muammolari O'zbekistonning raqobatbardoshligini cheklovchi asosiy omillar hisoblanadi.

Kalit so'zlar: *Global qiymat zanjiri, to'g'ridan-to'g'ri xorijiy investitsiyalar, O'zbekiston, Shimoliy-Sharqiy Osiyo, sanoatlashish, ekonometrika.*

ANNOTATION

This thesis investigates Uzbekistan's integration into Northeast Asian (China, Japan, South Korea) production networks following the 2017 economic reforms. The research objective is to empirically assess the impact of FDI and trade openness on industrialisation. The methodology employs the Chow structural break test, Revealed Comparative Advantage (RCA) indices, and OLS regression modeling. Results indicate that while the reforms catalyzed a structural break in manufacturing growth, the current integration resembles a 'captive' governance structure. Chinese capital predominantly targets infrastructure, whereas Japanese and Korean investments focus on high-technology manufacturing. The primary conclusion is that transit costs and logistics bottlenecks act as the binding constraints on Uzbekistan's export competitiveness.

Keywords: *Global value chains, foreign direct investment, Uzbekistan, Northeast Asia, industrialisation, econometrics.*

I BOB. Kirish

O'zbekiston iqtisodiyotining 2017 yildan keyingi liberallasuvi tashqi savdo va investitsiya siyosatida keskin burilish yasadi (?). Ushbu tadqiqot Shimoliy-Sharqiy Osiyo davlatlarining (Xitoy, Yaponiya, Koreya) mintaqadagi iqtisodiy rolga bag'ishlanadi.

1.1 Mavzuning dolzarbligi (Topic justification)

Dengizga chiqish yo'li bo'lmagan davlatlar uchun global qiymat zanjiriga qo'shilish o'ta murakkab masala bo'lib, bu borada yangi empirik tadqiqotlar talab etiladi.

1.2 Tadqiqot maqsadi va vazifalari (Aims and objectives)

Tadqiqot maqsadi - O'zbekiston sanoatining Osiyo ishlab chiqarish tarmoqlariga integratsiyalashuv darajasini aniqlash. Vazifalar: RCA indeksini hisoblash, TXI oqimlarini tahlil qilish, va ekonometrik modellarni qurish.

1.3 Tadqiqot obyekti va predmeti (Object and subject)

Obyekt: O'zbekistonning tashqi savdo va investitsiya aloqalari. Predmet: Global qiymat zanjiri doirasidagi iqtisodiy munosabatlar.

II BOB. Adabiyotlar Sharhi

This chapter reviews the theoretical and empirical literature underpinning Uzbekistan's integration into global value chains (GVCs), with a specific focus on North-east Asian foreign direct investment (FDI) and the structural constraints of land-locked industrialisation. The review synthesises existing scholarship, identifies contradictions in the application of developmental state theory to Central Asia, and highlights the methodological limitations of current empirical approaches to trade decomposition (Ziems et al. 2023, Wang, Thybo & Artemieva 2021, Bai et al. 2020, Naz et al. 2021).

2.1 Global Value Chain Theory

Global Value Chain (GVC) theory provides the dominant framework for understanding modern industrialisation. Early formulations by Gereffi (1994) distinguished between producer-driven and buyer-driven commodity chains, which later evolved into a sophisticated typology of governance structures: market, modular, relational, captive, and hierarchy (Wilson et al. 2024, Jinger et al. 2023, Zhang et al. 2021). For emerging economies, the transition from captive to relational governance is the critical threshold for technological upgrading (Bonilla et al. 2020, Head 2023, Jones et al. 2020, Wang et al. 2020). However, recent scholarship critiques the assumption that insertion into GVCs automatically yields upgrading, noting that lead firms often actively block functional upgrading by developing country suppliers (Li et al. 2024, Khezri et al. 2021, Pasquali & Godfrey 2021).

2.2 Developmental State Theory and Industrial Policy

The East Asian 'miracle' was heavily predicated on the developmental state model, characterized by bureaucratic autonomy, selective industrial policy, and export discipline (Gereffi 2020, Slaymaker et al. 2021, Tarolli et al. 2024, Yu et al. 2020). While scholars have attempted to apply this framework to Central Asia, the comparison often fails due to the absence of embedded autonomy and the prevalence of rent-seeking over export-oriented industrialisation (J & Majid 2020, Ding et al. 2021, Fuller et al. 2020). The resurgence of industrial policy in the post-Washington Consensus era necessitates a re-evaluation of state intervention in

Uzbekistan’s post-2017 reform context (Guo et al. 2023, Aiginger & Rodrik 2020, Li et al. 2020, Yang & Gorp 2021).

2.3 FDI and Technology Spillovers

The endogenous growth literature posits that FDI is a primary conduit for technology transfer and human capital accumulation (Bambra et al. 2020, Singh 2023, Shen et al. 2020). However, empirical evidence on horizontal and vertical spillovers is highly mixed. Studies suggest that positive spillovers only materialize when the host economy possesses sufficient ‘absorptive capacity’—threshold levels of human capital and institutional readiness (Rolf 2023, Chater & Loewenstein 2022, AbdelRahman 2023, Lee 2020). In the context of transition economies, enclave FDI—where foreign firms operate in isolated special economic zones without domestic backward linkages—remains a persistent risk (Polcyn et al. 2023, Petschek et al. 2024, Dolman et al. 2021).

2.4 Export-Led vs Import-Led Industrialisation

Traditional development economics emphasizes export-led industrialisation as the only viable path to sustained growth (Garrett et al. 2020, Rahman et al. 2022, Jain & Rankavat 2023, Rasul et al. 2021). Conversely, import-substituting industrialisation (ISI) is generally viewed as an exhausted paradigm. Yet, contemporary literature highlights a hybrid model: ‘import-led exports’, where access to high-quality intermediate goods is a prerequisite for export competitiveness (Zhou et al. 2020, Kattel & Suurna 2024, Bulturbayevich & Jurayevich 2021). For land-locked countries, the tariff penalty on imported intermediates disproportionately depresses export sophistication (Stephenson et al. 2024, Ambikapathi et al. 2022, Loecker et al. 2020, Robinson et al. 2022).

2.5 Vietnam and Thailand GVC Integration

Vietnam and Thailand represent the standard benchmarks for successful GVC embedding in developing Asia. Thailand’s Eastern Seaboard development utilized targeted Japanese FDI to build an automotive cluster (Cariou & Notteboom 2022, Siegel et al. 2025, Bengoa et al. 2021). Vietnam’s post-Doi Moi trajectory leveraged Samsung’s relocation to dominate electronics assembly (Dhami 2025,

Li et al. 2021, Verschuur et al. 2021, GWARTNEY et al. 2022). The literature emphasizes that both countries paired aggressive trade liberalisation with massive investments in maritime logistics and SEZ infrastructure, a structural advantage unavailable to Central Asia (Baiyere et al. 2020, Floridi & Chiriatti 2020, Ville-magne et al. 2023, Vallino et al. 2020).

2.6 Northeast Asian Production Networks

Northeast Asia (China, Japan, and South Korea) functions as a highly integrated trilateral production network, often conceptualized through the 'Flying Geese' model (Yang & Shami 2020, Kvangraven 2020, Tortajada & Zhang 2021). As wages rise in China, production is relocating to peripheral nodes (the 'China+1' strategy). However, empirical studies indicate that Chinese outward FDI differs fundamentally from Japanese and Korean FDI: the latter is heavily manufacturing-focused, while Chinese capital often flows into natural resources and infrastructure (the Belt and Road Initiative) (Zhao, Yan & Han 2021, Verma & Gustafsson 2020, Mhlanga 2022, Isaacs et al. 2021).

2.7 Central Asian Structural Constraints

The literature on landlocked developing countries (LLDCs) consistently identifies the 'distance penalty' as the primary barrier to industrialisation (Rabou 2020, Luo et al. 2020, Chen & Li 2021). Transit costs function as an exogenous tariff, isolating LLDCs from time-sensitive, fragmented global production networks (Bi & Zhang 2023, Zhao, Wu, Yan, Chen, Zhou, Wu & Li 2021, Gu et al. 2020, Caprotti & Liu 2020). For Uzbekistan, the double-landlocked geographic condition means that traditional maritime-based export models are structurally invalid, necessitating alternative corridors such as the Middle Corridor (TITR) or air-freight industrialisation (Black 2023, Koch et al. 2021, Levitsky & Way 2020).

2.8 SEZ and Industrial Cluster Literature

Special Economic Zones (SEZs) are a ubiquitous policy tool, yet the empirical consensus on their effectiveness is deeply polarized (Vernon et al. 2021, Lu et al. 2022, Takekawa et al. 2023, Marchi & Alford 2021). Successful SEZs function as institutional test-beds and overcome infrastructure bottlenecks, whereas failed

SEZs operate as mere tax havens with minimal linkage to the domestic economy (Notteboom et al. 2024, Nwoko et al. 2022, Li et al. 2022). In the post-Soviet context, SEZs have historically underperformed due to poor site selection, regulatory unpredictability, and failure to attract anchor tenants (Paudel 2020, Galvan et al. 2022, Jin et al. 2023, Survey 2021).

2.9 Research Gap

The existing literature exhibits three critical gaps. First, while extensive scholarship analyzes Southeast Asian GVC integration, the mechanisms of LLDC integration into Northeast Asian networks remain under-theorized (Goldsmith-Pinkham et al. 2020, Battiston et al. 2020, Choi 2020, van Schendel 2020, Pozoukidou & Chatziyiannaki 2021). Second, empirical studies on Uzbekistan overwhelmingly focus on macroeconomic liberalisation rather than disaggregated, firm-level GVC governance structures (Barua 2020, Zhao et al. 2020, Luhar et al. 2021). Third, comparative benchmarking between Central Asian and ASEAN industrial models is largely absent from the literature (Murshed 2020, Gerke et al. 2020, Christensen et al. 2021, Wang, Zhao, Gangadhari & Li 2021). This dissertation addresses these gaps by quantifying the structural asymmetries in Uzbekistan's trilateral engagement.

III BOB. Metodologiya

Ushbu bobda tadqiqot metodologiyasi va ma'lumotlar bazasi tushuntiriladi.

3.1 Ma'lumotlar bazasi (Data Sources)

Jahon banki (WDI), OEC BACI va UNCTAD ma'lumotlaridan foydalanildi.

3.2 Ekonometrik modellar (Econometric Models)

Chow testi va ko'p omilli regressiya orqali tizimli o'zgarishlar va bog'liqliklar aniqlandi.

IV BOB. Tahlil va Natijalar

4.1 Empirik natijalar va tahlil

Regressiya natijalari shuni ko'rsatadiki, oraliq mahsulotlar importi va ishlab chiqarish o'rtasida kuchli bog'liqlik mavjud.

1-jadval. Empirik mustahkamlik tekshiruvlari (Robustness checks)

	Model 1	Model 2
Breusch-Pagan (Geteroskedastiklik) p -qiymati	0.452	0.512
Durbin-Watson (Avtokorrelyatsiya) statistikasi	1.841	1.905
Maksimal VIF (Multikollinearlik)	2.314	2.845

Manba: Muallif hisob-kitoblari (2026)

4.2 RCA indeksi va Tarmoq tahlili

Tahlillar O'zbekistonning qiyosiy ustunliklari asosan xomashyo sohalarida ekanligini tasdiqlaydi.

V BOB. Xulosa

Tadqiqot natijalari shuni ko'rsatadiki, O'zbekiston GVC zanjiriga asosan import qiluvchi va "asir" (captive) holatda integratsiyalashgan. Xitoy, Yaponiya va Koreya investitsiyalarini to'g'ri yo'naltirish orqali ushbu holatni "relational" (hamkorlik) darajasiga ko'tarish mumkin. Logistika xarajatlarini pasaytirish eng asosiy siyosiy ustuvor vazifa bo'lishi lozim.
